# Part No. 40-40AN2420, 40-40AN2440 USB Video Display Adapters

Calrads 40-40AN2420\2440 USB Display Adapter enables you to connect additional monitors, projectors to a computer using existing USB 2.0 ports. For desktop users adding an extra monitor via USB connection is easier than ever without having to open the computer chassis to install an internal video card. The most obvious benefit is that you get more desktop area to have more applications visible at one time. For example, you may work on one monitor while your family watch video on the other. No more stacking windows within the confines of a single display. Or you may span an application, e.g. spreadsheets, across two or more displays. System performance is an important issue when using multiple monitors. Another benefit of this adapter is that it uses little computer resources, ensuring users get a quality display without comprising computer performance. When used with xLobby you can run multiple instances of the software providing multiple touchscreen control menus for different rooms. For example a user in the bedroom can be in the music menu and another could be in the lighting

### **Specifications**
