xLobby's 5 zone audio system provides a simple method to distribute audio to multiple rooms. The xLobby music management Interface GUI can be viewed and controlled from any HDMI TV using RF based remotes or from any web enabled device such as iPads, Iphone, Android, PC's, Mac products. Using xLobbys xPad technology many devices can be connected to the system at the same time and be on their own individual music zones or menus. The xLobby 4A system can access media content from local and external hard drives or from Network Attached System drives or any other resources such as computers on your network. Music can play through standard amplifier/receiver hardware or through multizone deistributed audio systems like, Russound, Xantech, Speakercraft. Play individual artists and playlists for each zone or play your iTunes library in any zone or mix you iTunes library with your standard music library. You can also stream music content from online to any Zone you want. The xLobby 4A media system can play all types of media files, mp3, m4a, wma, wav, ogg, ape, flac. Control the xLobby 4a by IR, RS232, IP-UDP protocols.
